Full Size Cable

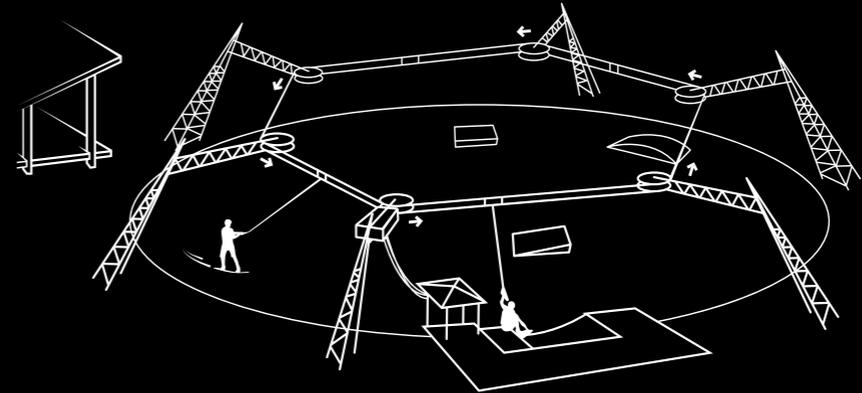

Reliable multi-rider cable system tailored to your wake park vision

SIMPLIFICATION FOR YOUR PEACE OF MIND

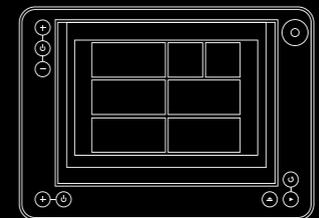

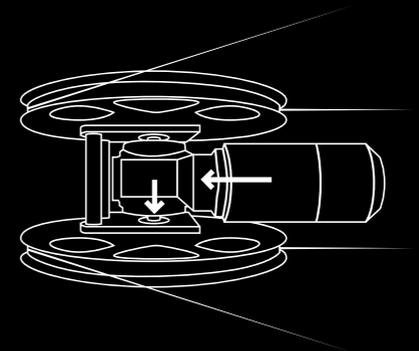

Can you imagine a Full Size Cable being the center of a recreational facility? We can. For us it is more than a 5 to 6 tower cable system.

We're constantly developing and innovating to bring even greater quality to our products and services. At the same time, we strive to simplify

our products to save you time, money and worries – providing peace of mind with our solutions.

- The simplified COS+ software of the Full Size Cable sets a new standard. It offers more safety, prevents man-made operating errors and contains an intelligent ticketing system.
- Our new control cabinets are built with international industry standard components. They are lightning-resistant and require fewer parts for even more reliability.
- Our new future-proof single cable drive consists of less moving parts and requires less maintenance.
- To us simplification means not only products but also processes. We continue to install more Full Size Cables every year and enjoy passing this knowledge on to our customers. Together we simplify your path to a successful wake park.

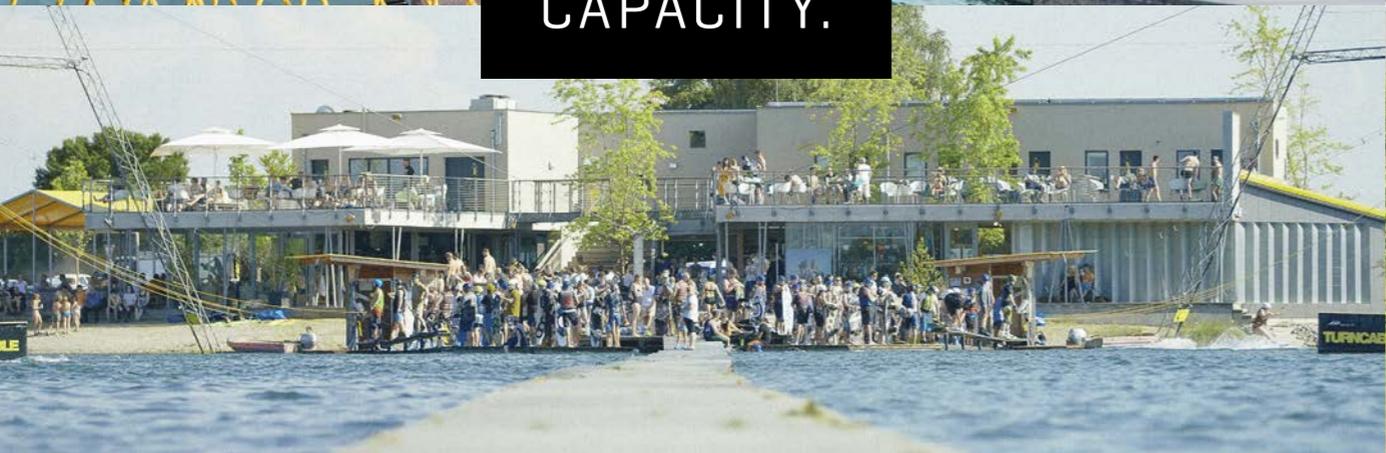

PERFORMANCE.

CAPACITY.

FUNCTIONALITY.

A step into the future

Control Cabinets

We designed new control cabinets that allow for easy operating and high reliability. Together with our experienced partner, Frey Ingenieure, we simplified the construction using less components, while providing the ability to remotely access in case of occurring problems, for analytics and always up-to-date software. The components mainly come from Siemens – such as SPS technology – and offer the industry standard high-quality and worldwide short-term maintenance service. The control cabinets are lightning-proof and almost fail-proof, resulting in noticeably fewer downtimes and thus higher capacity.

COS+ Software

Our new COS+ software is designed for safety and easy handling. Potential for operator negligence is drastically reduced with our new automatic operating system. This allows the operator to concentrate on giving riders the best riding experience without making mistakes. The integrated ticketing system encompasses customer registration, the creation and activation of tickets, and start dock validation.

Control Panel

The system runs on an industry-standard outdoor touch panel from Siemens that withstands any temperature, atmospheric influences and humidity. The dazzle-free daylight readable display with automatic and manual dimming eliminates nasty reflections and makes first-class operation with pin-sharp visualization possible. The custom housing with intelligent and durable design features stainless steel buttons in an operator-friendly configuration. All interfacaces were designed to be modern, clean and user-friendly – to make work even more fun.

Single Cable Drive

Sesitec's innovative single cable drive makes our Full Size Cable even better. We've abandoned the cardan shaft and a differential compensation by driving only the bottom running cable. The simpler drive and a reduction in moving parts means easier and less frequent maintenance, and greater reliability. Moreover, this solution is absolutely future-proof. The smaller, high efficient electric motor has the same power but needs less electricity which makes it more eco-friendly, flexible and cost effective. Keeping with our environmental stewardship we use only eco-friendly oil for our motors.

Running Cable

Sesitec's Full Size Cable runs with a high-quality cable that is constructed of synthetic fibers encased in steel. Thanks to the internally greased synthetic fibers outside greasing is a thing of the past which makes maintenance cleaner and easier. Due to its special non-stretch construction the cable has a longer lifespan and requires less maintenance than other running cables.

Sensor Technology

Our advanced sensor technology ensures a reliable interaction between all components such as the catch fork, the elevator and the magazine. The automation reduces the number of manual operations required by the operator allowing him or her to focus on what is important – the customer's experience.

CAPTAIN POS

Sell, manage, report, grow

The new COS+ software has a built-in interface to Sesitec's Captain POS all-in-one software solution for wake parks. Captain POS allows you to manage your customers, sell items, coordinate your rentals and download extensive reports.

OUR STRENGTH: INDIVIDUAL PROJECT PLANNING

It is our mission to build the most successful wake parks in the world – and exactly because of that, we know how important it is to stand by our clients in word and deed as a partner on their way to their own wake park. For us, every new park is a unique project with different goals and different challenges. We take into account the environmental conditions and our customers' requirements and advise from the early planning phase onward.

SERVICE

INSTALL & TRAINING

Our installers are well-trained and have set up many Full Size Cables all around the world. During and after the installation they will share their wakeboard and cable park knowledge, and train you in operating and maintaining your Full Size Cable. We are there for you from start to finish.

CUSTOMER SUPPORT

We see our customers as partners who share our standard of high quality excellence and our passion for wakeboarding. With our well-trained and experienced international team we provide personal and immediate service via telephone, e-mail or on-site. No matter how complex or complicated your problem may seem, we will find a solution.

SPARE PART ONLINE SHOP

Sesitec operates several warehouses worldwide and an extensive online shop where our customers can purchase all their spare parts directly. We dispatch orders within 24 hours on working days, and offer express shipping on demand.

WE BUILD DREAMS Est. 1992

Sesitec is your wake park partner from the early planning until ... forever. We support you in developing a unique recreational facility that attracts your target groups and brings you high return on investment. Together we resolve obstacles that may arise along the way. With over 90 Full Size Cable and over 480 System 2.0 installations worldwide, we're constantly evolving - always with our mission in mind: We build the most successful wake parks in the world.

All our actions are based on our values:

Living Water

Wakeboarding is our shared passion. Motivated by a desire to build exceptional wake parks, we come to work each day with a smile. Our company consists of keen wakeboarders, who know what wakeboarders want, and former wake park managers, who know how to successfully run a wake park. It's our calling to bring wakeboarding to the world and make it more accessible for everyone.

One Team

Teamwork makes the dream work. We are united by an enthusiasm to bring new and innovative projects to life, which feeds into our larger goal of expanding the sport of wakeboarding. Friendly and dependable relationships both with each other and with our customers is the essence of our company. We work together as one and can rely on each other 100 percent.

First Lap

We have never settled for the status quo and push ourselves daily to continue progressing our passions. Catering to the first time rider or pushing the limits of what's capable in our industry is what we're made for. We ride, we work, we innovate, and we evolve. This is in our blood from the first lap to the last.

Flowing Perfection

Quality is our trademark. Our parks are fun, durable and safe. Everything that we do, every part that we produce and install, is handled and tested with the utmost care. The high standard of our work, longtime experience, competence and passion are what makes ours a premium product.

A wake park is more than just a cable, and that is why we advise **360°** our customers on all aspects of running a successful business.
